

Test Paragraph 1: Rich Text Styling & Hyperlinks

This paragraph verifies that your text-safe layout engine processes your typographical emphasis tags seamlessly. If the parser is working correctly, this phrase must appear completely bolded, this section should display as italicized, and this line must show up with an underline stroke beneath it. The spacing between this block and the next section should be even, uniform, and cleanly handled by the structural CSS profile rules instead of manually calculated pixel coordinates.

Test Paragraph 2: Alignment Check (Center & Right Placement)

This paragraph verifies that your text-safe layout engine processes your typographical emphasis tags seamlessly. If the parser is working correctly, this phrase must appear completely bolded, this section should display as italicized, and this line must show up with an underline stroke beneath it. The spacing between this block and the next section should be even, uniform, and cleanly handled by the structural CSS profile rules instead of manually calculated pixel coordinates.

This paragraph verifies that your text-safe layout engine processes your typographical emphasis tags seamlessly. If the parser is working correctly, this phrase must appear completely bolded, this section should display as italicized, and this line must show up with an underline stroke beneath it. The spacing between this block and the next section should be even, uniform, and cleanly handled by the structural CSS profile rules instead of manually calculated pixel coordinates.

Test Paragraph 3: Multi-page Pagination & List Flow

This section tests how lists and paragraphs behave across multiple pages:

- First verification milestone item.
 - Second structural layout check item.
 - Third
 - Fourth
